Summary

Hardworking and curious software engineer, interested in development and making things easier. Motivated and responsible with good experience in teamwork. Entering the backend field with GO (golang) about **1 year** ago.

I like to accept more responsibilities and go deeper in my specialized fields. Committed to coding standards like TDD and clean architecture and design patterns.

Experiences

pair programming
Golang Software engineer

January 2023 -Now (More than 10 months)
remote

During this time, I worked with my friend who has good experience in the field of software engineering. In these months, I learned programming concepts and chose **Golang** as my first language. As a junior software engineer, I tried to create and nurture the proper structures in myself to become a strong software engineer.

I enhance the knowledge I gained with clean and standard architecture principles and design patterns.

Blogo

The most important and last project we worked on during this period is the blog project. We used **echo** framework in this project and chose **PostgreSQL** as its database. To connect to the database, we used **Bun** and **Gorm** as ORM arbitrarily and at the same time. This project also includes things like **JWT**, **ZAP** and **Swagger**.

My role as the second person in the project was to review the specified tasks and solve the challenges based on that and then apply the changes using **Git** and **Docker**.

Follow the link to see more details: [bloggo](#)

My personal projects

API Key words: http, restful, mongoDB, jwt **Box-crawler** Key words: data scraping, cron job **GoCache** Key words: in memory cache, concurrency

GoWebify Key words: front end, sending mail

Skills

Golang – echo and gin

Technologies: grpc, kafka(basic), docker, git, CI/CD, unit test, SQL and NOSQL

education

Master of Software Engineering

Best undergraduate student and Top master's student
